Keeping network attacks at bay

FORTINET, the confirmed market leader in Unified Threat Management and only provider of ASIC accelerated, network-based antivirus firewall systems for real-time network protection, has announced that Hyundai Merchant Marine Co., Ltd., has successfully deployed the FortiGate 3000 and FortiGate 300 network security platforms to protect its corporate headquarters and branch offices.

The company uses a modern, high speed IT infrastructure and network to process customer orders and payments and track and trace shipments in real time. Its extensive, distributed network and critical information assets require a high level of network security for tracking billions of transactions annually.

Hyundai sought a comprehensive, integrated large-scale network solution that could be managed efficiently and easily and could handle heavy network traffic. They engaged Fortinet Partner Dacom, a system integrator and provider of customised security services, to recommend and deploy an effective solution. Since implementing the FortiGate platform there has been no damage from network or content threats.
