FORTINET

FortiGate-3600A

Fortinet's FortiGate-3600A appliance sets a new industry standard for high performance, multi-threat security. It increases deployment flexibility by including additional ports and slots that can be leveraged for WAN interfaces. The integration of Fortinet's next generation FortiASIC Content Processor and new system components boost performance up to 50 percent, making the FortiGate-3600A the fastest multi-security appliance in the industry. Competitive multi-threat security appliances typically offer 30 to 50 percent less firewall throughput than the FortiGate-3600A. It also includes expansion slots that provide deployment flexibility via standard-based AMC network adaptor modules – enabling customers to adapt to a variety of WAN technologies and future internal network technologies such as 10-GigE.
