

# Fortinet Ranked No. 1 in Worldwide UTM Revenue for 2006

**F**ortinet announced that IDC research data confirms that the company ranked No. 1 for worldwide UTM revenue for 2006. Additionally, in line with Fortinet's objectives to grow in the high-end market, IDC data confirmed that in Q4 2006, Fortinet experienced significant quarter over quarter growth in shipments of its high-end security systems.

Data in IDC's Worldwide Quarterly Security Appliance Tracker, Q4 2006, which also includes data for 2006, indicated that Fortinet is the overall leader in UTM factory revenue for all of 2006 and Q4 2006, ahead of SonicWall, Juniper and Cisco. Fortinet also maintains a leading position in UTM in

Western Europe and Asia Pacific (including Japan), based on strong revenues and success in all market segments for 2006.

"Fortinet has seen a strong increase in customer demand for our high-end FortiGate security systems, which is supported by IDC's latest data," said Ken Xie, founder and CEO of Fortinet. "This demand has been driven by large enterprises, MSSPs and carriers worldwide that recognize that Fortinet provides the most flexible, scalable and comprehensive multi-threat security platform available to address their varying security needs."

IDC defines UTM security appliance products as those that integrate multiple

security features within one device, including network firewalling, network intrusion detection and prevention (IDP), and gateway anti-virus. Fortinet takes UTM further through its family of award-winning FortiGate multi-threat security systems that integrate eight essential security applications and services – including firewall, antivirus, virtual private

network (VPN), intrusion prevention (IPS), anti-spam, Web content filtering and traffic shaping – that can be deployed individually, or combined as a UTM solution.
