### Fortinet Success in Securing Financial Institutions

DATE: 2005-07-28 08:12:29 UTC | SOURCE: KevinT

Caisse Populaires du Manitoba Selects FortiGate Security Appliances to Protect its Multi-Platform Member and Employee Networks

SUNNYVALE, Calif., July 27 -- Fortinet -- the pioneer and market leader of Unified Threat Management and only provider of ASIC-accelerated, network-based antivirus firewall systems for real-time network protection -- today announced that Caisse Populaires du Manitoba, a Canadian based financial institution, has deployed Fortinet's FortiGate systems to protect its network of more than 30,000 members, over 250 employees, and spanning 30 branch office sites with remote users, from harmful network threats such as data privacy theft, viruses, pharming, phishing, and more. Caisse Populaires du Manitoba is a bilingual financial co-operative, managing more than \$500 million that directly contributes to the economic development of the Manitoba community.

As a financial institution servicing its members with a variety of online and computer-based transaction-based products and services, Caisse Populaires du Manitoba was looking for a robust security solution to protect its multi-platform enterprise and extended enterprise of remote offices and workers. The company evaluated products from leading security vendors and chose Fortinet based on its ability to demonstrate a clear capital investment and operational value proposition through its full-featured, scalable product line that offers best of breed security applications including stateful firewall, antivirus, VPN, intrusion prevention, Web content filtering, antisppam and traffic shaping.

"The Fortinet solution scales to meet our wide ranging internal and external network security needs from the datacenter to our branch offices while providing the same comprehensive functionality across all products. This allowed us to implement a full end-to-end cost effective network security platform, with a critical eye towards minimizing unnecessary capital expenditures, tools from numerous vendors and burdensome administration," said Bernie Marcoux, director of Information Technology for Caisse Populaires du Manitoba. "With Fortinet's FortiGate systems, we are securing traffic for thousands of customers' data, hundreds of employees across 30 sites as well as remote workers."

#### Enterprise Security Appliances for the Finance Vertical

With a mixture of Windows, UNIX and Linux systems in Caisse Populaires' enterprise delivering critical business applications such as banking systems and transaction processors, Fortinet demonstrated a clear value proposition with a product line that easily scales through Caisse Populaires' entire enterprise, data center and extended enterprise, including remote office locations and employees.

Caisse Populaires deployed Fortinet's enterprise-class FortiGate-500 and mid-range FortiGate-200 security appliances to provide complete content security for its headquarters and datacenter. Additionally, FortiGate-60 small/medium business (SMB) security appliances are deployed for content protection at each branch

**About Fortinet ( [www.fortinet.com](http://www.fortinet.com) )**

Fortinet is the pioneer and market leader of Unified Threat Management. Its award-winning FortiGate Series of ASIC-accelerated antivirus firewalls, winner of the 2003 Networking Industry Awards Firewall Product of the Year and the 2004 Security Product of the Year Award from Network Computing Magazine, are the new generation of real-time network protection systems. They detect and eliminate the most damaging, content-based threats from e-mail, Web and file transfer traffic such as viruses, worms, intrusions, inappropriate Web content and more in real time - without degrading network performance. FortiGate systems are the only security products that are certified by the ICSA (antivirus, firewall, IPSec, SSL VPN), and deliver a full range of network-level and application-level services in integrated, easily managed platforms. Named to the Red Herring Top 100 Private Companies, Fortinet is privately held and based in Sunnyvale, California.
