FortiAIOps empowers organizations to leverage AI and Machine Learning (ML) to simplify their daily lives when managing a complex network. Artificial Intelligence can systematically consume the extensive amount of data being produced throughout the Security Fabric, correlate it, and analyze the results with Machine Learning so that you don’t have to. FortiAIOps works across our FortiGate managed Wireless and Switching portfolios (FortiAP and FortiSwitch) to keep the network experience for your users operating at peak levels. The Fortinet AI-powered approach makes it possible for teams to predict potential issues before they happen, receive recommended actions, and automate tasks such as fixes. This action gives more time back to IT to take care of the strategic initiatives that matter to your company.

FortiAIOps operates as a Management Application Extention within FortiManager to keep your Fabric Management Center a single entity with one login and one place to go to manage the Fortinet Security Fabric.

Key Features

- **AI-Powered Insights:** Cross correlate events and data from across the deployment to quickly identify issues
- **Machine Learning Against Trends:** Learn what's normal for your network and your traffic, then keep that performance across time
- **Automated Response:** take human response time out of the equation by letting FortiAIOps handle issues

Benefits

- **Lower TCO:** Reduce the amount of time staring at management screens or trying to resolve issues by leveraging the power of artificial intelligence to get to root cause quickly
- **Reduce Trouble Tickets:** Identify and correct issues before they start impacting users
- **Greater Workforce Productivity:** When the network works, employees can work. FortiAIOps ensures that your operations continue uninterrupted

Artificial Intelligence with Machine Learning for Enhanced Network Operations
FEATURE HIGHLIGHTS

Simplified Dashboard
With a simplified dashboard setup, FortiAIOps allows the user to quickly get a read on their network health and whether there is anything that needs attention.

Monitor Desired Service Levels
Use trending information and configured SLAs determine the good or bad health of your network.

Minimal Network Impact
FortiAIOps leverages the same logs that FortiAnalyzer is already collecting, meaning there is no additional overhead on your network to add Artificial Intelligence to the Security Fabric. This activity is another benefit of a combined platform approach to Security-Driven Networking.

Get Answers Quick, or See Details if Desired
With the tools available within, you can quickly get remediation suggestions for detected network issues. But if you want to dive in further, FortiAIOps will take you directly to the information you're interested in and let you dive as deep as you want into logged information about the device.
ORDER INFORMATION

FortiAIOps installs as a Management Extension Application within the Fabric Management Center. Per FortiGate licenses then are added to enable AIOps management of those FortiGates and any and all FortiAP or FortiSwitch devices (regardless of number) managed by those FortiGates.
