

FortiWeb™ Cloud WAF as a Service for AWS

A Cloud Native Solution deployed in the same AWS Region as your application

FortiWeb Cloud WAF as a Service delivers Web application security as a SaaS solution. Protect your hosted web applications without deploying and managing infrastructure — let Fortinet secure your applications while you focus on delivering business value with your web applications.

The solution requires minimal configuration and management and can be deployed in front of your applications by subscribing via the AWS Marketplace. The solution uses multiple protection techniques to quickly and accurately mitigate threats while allowing normal traffic to proceed.

A Full-featured WAF that's Easy to Deploy and Manage

With FortiWeb Cloud WAF as a Service, enjoy the protection of a full-featured Web Application Firewall (WAF) as you rapidly roll out your applications in AWS without managing and maintaining your own infrastructure.

Your attack surface changes every time you deploy a new Internet-facing application, and with public cloud you can deploy those Internet-facing applications faster than ever. You need a solution that can protect any web-based application you deploy, including short-lived applications that may only run for a short time and long-lived applications that can evolve rapidly as you adopt a DevOps approach to deliver applications and services at high velocity.

Protecting your applications with a SaaS delivered WAF solution also provides the ability to pay as you go, allowing you to provide the same protection for all of your AWS hosted applications without standing up excess capacity that might be underutilized.

Highlights

- 100% Cloud-based WAF as a Service
- Pay as you go, based on traffic and the number of applications protected
- Protection against OWASP Top 10, including cross-site scripting and SQL injection
- Rapid deployment via AWS Marketplace
- Advanced analytics and reporting
- Fine tuning for exceptions
- Secured by FortiGuard Labs
- Delivered within the same AWS region as your application, providing improved performance, a simplified regulatory environment, and reduced bandwidth costs

Highlights

Web Application Threat Protection

FortiWeb Cloud WAF as a Service uses the same comprehensive approach to security as other FortiWeb form factors, including IP reputation, DDoS protection, protocol validation, application attack signatures, and more to defend your application against a wide range of threats, including the OWASP Top 10.

Simplified Deployment

Simply purchase through the AWS Marketplace and follow the built-in setup wizard. With predefined policies, FortiWeb Cloud WAF as a Service delivers the security you need within minutes, removing the usual complexity required when setting up a WAF. More advanced users can easily enable additional security modules if needed, free of charge. Deploy in minutes and you're protected from threats such as cross-site scripting, cross-site request forgery, denial-of-service, brute-force attacks, and SQL injection.

Deployed in the same AWS region as your Application

Because Fortinet delivers the service using a colony of WAF gateways in the same AWS region as your application, you enjoy the benefits of low latency, intra-region bandwidth rates for your traffic between your application and the WAF, and a simplified regulatory environment.

Order Information

Available through the Amazon Web Services Marketplace.

Secured by FortiGuard Labs

Fortinet's Award-winning FortiGuard Labs is the backbone for FortiWeb Cloud signatures and IP Reputation. As long as you're an active FortiWeb Cloud Subscriber you automatically have the latest protections and updates without having to do anything further.

Units	Price
Total number of web applications protected by FortiWeb Cloud	\$0.03 / unit
Total data transferred via FortiWeb Cloud (GB)	\$0.30 / unit
