

CYBER THREAT ASSESSMENT FOR EDUCATION

Student Data Privacy is in the forefront of the minds of all school officials. Having conducted over 3000 cyber security assessments over the last year alone, close to 300 in the education sector, FortiGuard Labs has identified that the average institution had three or more pieces of malware. More in depth research also revealed that the most active botnet was the Pushdo, a highly evasive botnet which has seen to be pushing out different pieces of malware, mostly related to steal credentials and spam engines.

Respond fast and reduce downtime with Fortinet as your cyber security partner.

A Fortinet Cyber Threat Assessment evaluates your network's current security effectiveness, identifies student and staff online accountability, and tracks application usage and performance at no cost to your organization. A Fortinet expert will deploy a FortiGate appliance to monitor key indicators within your network and 5-7 days later you will be presented with a comprehensive report that speaks to your organization's internet security posture.

Get the facts about your network security.
