

CYBER THREAT ASSESSMENT FOR HEALTHCARE

Network security is top of mind for all healthcare executives. Phishing scams, ransomware, cryptomining, malware-infected medical devices, or even DDoS attacks are crippling healthcare entities across the care continuum and have become headline news. In fact, Healthcare experiences twice the number of cyber attacks as other industries.

- Is your organization prepared to respond to sophisticated, mass-produced cyber threats?
- Does your organization have the operational visibility to assess the vulnerability of mission- and life-critical applications on your network?
- Is your current security infrastructure able to detect intrusion or data leakage events?

Fortinet's Cyber Threat Assessment Program (CTAP) is here to help. CTAP will validate your network's current security accuracy, analyze application traffic, assess user productivity, and monitor network performance—all at no cost to your organization. A Fortinet expert will deploy a FortiGate high-performance next-generation firewall to monitor key indicators within your network, and 5-7 days later you will be presented with a comprehensive report that speaks to your organization's network security posture and network activity. It's easy deployment, but yields powerful results.

Ensure a secure, high-quality healthcare environment.
