Simple and Effective Cybersecurity for Small Businesses

Enterprise-grade Protection and Performance Without the Complexity and Cost

Your small business needs technology to work together with little to no effort. You also require simple and effective security that you can trust. Fortinet makes it easy to consolidate and centralize the management of FortiGate NGFWs, switches, access points, and 5G/LTE gateways via an integrated cloud management service.

FortiGate NGFWs: The Most Deployed and Trusted Network Firewalls in the World

FortiGate is a purpose-built next-generation firewall that delivers unparallel protection and performance to safeguard your mission-critical networks—without increasing complexity and expense. As a cornerstone of the Fortinet Security Fabric, FortiGate provides out-of-the-box integration and easy automation across Fortinet products. You can simplify the deployment, monitoring, and management of all Fortinet products connected to your LAN and WLAN from a single platform to secure your business and employees.

FortiGuard Services: AI-powered Protection Stops Ever-evolving Cyberthreats

The FortiGuard Unified Threat Protection bundle gives you peace of mind by providing comprehensive protection for applications, content, web, devices, and users. It intelligently assesses risks and counters known and unknown threats to ensure rapid, real-time detection and response—regardless of where they occur—via a context-aware, consistent security policy for users and applications.

FortiGate Cloud: Simplified Management and Analytics

FortiGate Cloud is a cloud-based service that simplifies network operations by providing centralized management for FortiGates and downstream connected devices such as the FortiSwitch, FortiAP, and FortiExtender. With enterprise-grade visibility and analytics included, FortiGate Cloud easily becomes your one-stop shop for helping efficiently manage IT devices and effectively reduce cyber risk.

FortiConverter Service: Migration to FortiGate Made Easy

FortiConverter Service accelerates your transition from legacy firewalls to FortiGate NGFWs. The service employs best practices by using proven methodologies and validation to reduce human errors, limiting the negative impact on your business operations.
