Telemedicine is Growing

The value of the telehealth sector is expected to reach $91.30 billion by 2025.

Impact of Telemedicine:

- 76% of U.S. healthcare organizations provided telemedicine services.
- 64% of households have benefitted from telemedicine.

What’s at Risk:

- 60% of healthcare organizations were concerned about being hacked.
- 65% of companies expressed concerns about negligent users and how to patch the unintentional gaps in security they create.
- 7% of organizations expressed concerns about how to adequately patch the unintentional gaps in security they create.

Insider Threats in Healthcare

The healthcare industry is the top industry where insider threats are responsible for a higher percentage of breaches than external actors.

- Malicious Insiders: 60% of breaches were caused by malicious insiders and the threat they pose to data security.
- Negligent Users: 65% of companies expressed concerns about negligent users and how to patch the unintentional gaps in security they create.
- 7% of organizations expressed concerns about how to adequately patch the unintentional gaps in security they create.

Connected Medical Devices

The increase in connectivity, while improving patient outcomes and liability risks, also increases the risks.
