Proven Success in Virtual Environments

Fortinet introduced Virtual Domain (VDOM) technology in 2004. Since that time, we have offered virtualized security to service providers and enterprises alike. With the addition of the virtual appliance form factor, Fortinet now offers greater choice and flexibility to customers by providing the ability to deploy our security solution within existing Cloud and virtualized infrastructure.

- Complete solution for the Cloud and virtualized data centers
- Rapid deployment capabilities
- Increased visibility within virtualized infrastructure
- Ability to manage physical and virtualized appliances from a ‘single pane of glass’ management platform
- Simple, scalable licensing models
- Support for multiple virtualization / cloud platforms
  - VMware vSphere
  - Citrix XenServer
  - Open Source Xen and KVM
  - Microsoft Hyper-V
  - Amazon Web Services (AWS)

Choice of Form Factor

Few organizations use 100% hardware or 100% virtual IT infrastructure today, creating a need for both hardware appliances and virtual appliances in your security strategy. Fortinet allows you to build the security solution that's right for your environment with hardware and virtual appliances to secure the core, the edge and increase visibility and control over communications within the virtualized infrastructure. FortiManager virtual appliances allow you to easily manage and update your Fortinet security assets — hardware, virtual or both — from a single pane of glass. FortiAnalyzer central reporting, FortiWeb web application security, FortiMail messaging security, FortiAuthenticator user identity management, FortiADC application delivery controller, FortiCache web caching and optimization, FortiVoice phone systems, FortiRecorder video security surveillance appliances and FortiSandbox advanced threat detection round out Fortinet's current virtual appliance solutions.
Unmatched protection and flexibility
For your data center and cloud deployments, Fortinet’s industry-leading combination of next generation physical and virtual machine solutions provide you, with the protection and flexibility you need to easily and quickly take advantage of these technologies.

Virtual machine security with unmatched product line breadth
Fortinet offers the industry’s most complete virtual machine security technology line-up. You can deploy the security you need where you need it in your cloud and data center environments, including unified threat management/next generation firewall, web application firewall, database and messaging security.
