Free Cyber Threat Assessment Analysis for the Healthcare Industry

Ensuring Safe and Secure Patient Care Environments

Network Security is top of mind for all healthcare executives. Data breaches from phishing scams, viruses, malware-infected medical devices, or even DDoS attacks are crippling healthcare entities across the care continuum and have become headline news. Is your organization prepared to respond rapidly to a sophisticated cyber threat? Does your organization have the operational visibility to assess the vulnerability of mission-critical and life-critical applications on your network? Is your current security infrastructure able to detect intrusion or data leakage events? Are you aware that nearly 100 million consumer health records have already been exposed by data breaches from hackers or IT incidents in the first half of 2015?

Fortinet’s Cyber Threat Assessment Program (CTAP) is here to help. CTAP will validate your network’s current security accuracy, analyze application traffic, assess user productivity, and monitor network performance - all at no cost to your organization. A Fortinet expert will deploy a FortiGate high-performance next generation firewall to monitor key indicators within your network, and 5-7 days later you will be presented with a comprehensive report that speaks to your organization’s network security posture. Easy deployment, but with powerful results.

- **Security and Threat Prevention** – How effective is your current network security solution? You will be provided with a comprehensive report that speaks to application vulnerabilities attacking your network including malware/botnets and even pinpoint “at risk” devices within your network.
- **Staff and Guests Online Accountability** – Are staff and guests abiding by your organization’s acceptable use policy? Would you like to know how applications and web resources are being used within your network? Discover how peer to peer, social media, instant messaging, and other application subcategories are being used on your network.
- **Network Utilization and Performance** – With an influx of devices on your network, do you know how your network security solutions should be optimized for greatest performance? Find out more about your throughput, session counts, and bandwidth requirements that occur during peak care hours. You will learn how to ensure that your security solution has been optimally sized for patient care.

For more information about the Fortinet Cyber Threat Assessment service, please contact us at healthcare@fortinet.com or 1-866-868-3678. This report will provide you with unmatched insight into your current security posture and network activity. This program is complimentary to Healthcare organizations across the United States: www.fortinet.com/assessment.
