360 Protection Bundle
Delivering Real-Time Network Management, Comprehensive Security and Operational Services, and Advanced Support

The growth of technologies such as public and private clouds, software-defined wide-area networks (SD-WAN), and DevOps has resulted in increasingly complex IT networks at almost every organization. At the same time, cybersecurity threats have become more sophisticated and fast-moving. The Fortinet 360 Protection Bundle helps companies of all sizes address these key challenges.

Organizations of all sizes are delivering greater business agility, improved performance, increased efficiency, and cost savings through the strategic use of cutting-edge technology. For example, public and private clouds, SD-WAN, and DevOps processes are transforming the marketplace and promoting business growth across many industries.

While their benefits are undeniable, such innovations also bring greatly increased network complexity, which in turn introduces new security issues. An organization’s data, applications, and network traffic are no longer confined to the corporate data center, where a perimeter-based approach could provide protection. Instead, the attack surface has dramatically expanded to the edges of the network. This makes it more difficult to protect against malicious threats.

At the same time, the threat landscape is becoming more complex, with increasingly sophisticated attacks occurring more frequently and moving at machine speed.

Fulfilling Key Use Cases
The 360 Protection Bundle supports three critical use cases for network security teams:

1. Cloud-based, single-pane-of-glass management. The 360 Protection Bundle helps organizations centralize visibility and management to a single pane of glass—no matter where devices are located.

2. Risk-based analytics, orchestration, and automation. By supporting an integrated architecture, the 360 Protection Bundle enables centralized logging, reporting, and analysis. It also provides for extensive automation of detection, protection, and response processes.

3. Comprehensive support. FortiCare ASE Support provides prioritized, world-class support for end-users and managed security service providers (MSSPs). Advanced support engineers (ASEs) located around the globe deliver on aggressive service-level agreements (SLAs) to ensure that issues are resolved in a timely manner.

Security-related services will be both the largest ($40.2 billion in 2018) and the fastest growing (11.9% CAGR) category of worldwide security spending between now and 2022.1
The 360 Protection Bundle includes comprehensive operational, security, and support services that enable organizations of any size to follow the best practices for operations and security recommended by Fortinet—all without adding staff. These services include:

- **Security services.** The 360 Protection Bundle includes a complete package of services powered by threat intelligence from FortiGuard Labs. This includes advanced malware protection with sandbox analysis, content disarm and reconstruction, and virus outbreak prevention. As an added benefit, the Security Rating Service scores organizations’ security posture against benchmarks and peer organizations.

- **Operational services.** The 360 Protection Bundle includes FortiManager-Cloud and FortiAnalyzer-Cloud, which enable organizations to leverage centralized management and analytics tools for the entire Fortinet Security Fabric. Also included are centralized security tools for the SD-WAN infrastructure and the FortiCASB-Cloud cloud access security broker to provide consistent policies and control across multiple clouds.

- **ASE FortiCare Support.** The highest level of support available from Fortinet, ASE FortiCare Support provides prioritized support—24×7×365. Also included are application control services to protect the network and ensure that resources are used for business objectives.

### Operational Benefits

Creating an integrated security architecture with the 360 Protection Bundle brings a number of benefits to an organization:

<table>
<thead>
<tr>
<th>Risk reduction</th>
<th>Efficiency and productivity gains</th>
<th>Lower TCO</th>
</tr>
</thead>
<tbody>
<tr>
<td>through automated threat response, improved configurations, and better operations management.</td>
<td>through elimination of manual processes and centralized control and analysis.</td>
<td>due to reduced operational glitches and fewer security incidents requiring manual response.</td>
</tr>
</tbody>
</table>

Add to these benefits a greatly improved security posture based on security best practices, and the 360 Protection Bundle is a great investment for organizations of all sizes.
