

Cyberthreat Assessment for Retail

Retailers are common cyber criminal targets. As digital innovation and the need to provide omnichannel shopping experiences drive network transformation, retail cybersecurity becomes more vital, but also more complex.

This complexity is a leading barrier to protecting sensitive data on point-of-sale (POS) systems and other devices carrying consumer financial information. Retail cybersecurity solutions must provide the centralized visibility and management of security devices without sacrificing efficiency or the quality of the customer experience.

- Is your organization prepared to respond to sophisticated, mass-produced cyber threats?
- Does your organization have the operational visibility to assess the vulnerability of mission- and life-critical applications on your network?
- Is your current security infrastructure able to detect intrusion or data leakage events?

Fortinet's Cyber Threat Assessment Program (CTAP) is here to help. CTAP will validate your network's current security accuracy, analyze application traffic, assess user productivity, and monitor network performance—all at no cost to your organization. A Fortinet expert will deploy a FortiGate high-performance next-generation firewall to monitor key indicators within your network, and 5-7 days later you will be presented with a comprehensive report that speaks to your organization's network security posture and network activity. It's easy deployment, but yields powerful results.

Learn why some of the largest retailers worldwide depend on Fortinet for brand protection and to secure their most valuable assets at www.fortinet.com/retail.

Ensure a secure, high quality environment.
